

SUSTAINABLE PRODUCTION FOR INTERESTED PARTIES & STAKEHOLDERS

Homecare Textile has taken 'Conscious Initiative' for **Sustainable Textile Production** by involving sustainability practices in business practices and manufacturing methods to improve economic, social, and environmental sustainability. **Homecare** is **STeP** certified company in **level 3** which shows its best commitment towards sustainability also we are Pakistan's First Textile Mill which is producing products with **MIG** labels (Made in Green by Oeko-Tex).

Homecare has its own designing department which designs products which use least resources and least impact environment and consumer health.

we are also **GOTS** certified company and we emphasize on environmental friendly raw materials therefore we prefer to produce Organic products, **GOTS** certified yarn make sure that the land and water used in production is in natural way and impacting least on environment, animals and crop.

Our Production considerations include the water and energy used for manufacturing, we have adopted various practices and installed modern equipment through which we produce products with least resources.

We are highly conscious for the environment and consumer health therefore we select dyes, auxiliaries and pigments that positively impact the environment, health of textile workers as well as consumers of the final product. **Homecare** is Detox tested company which is initiative of Green peace and our DATA is published on IPE.

Homecare Textiles Promotes recycling of material for it we dispose of our wastages through legal contractors which recycle the wastages into useful raw materials.

Homecare has taken initiative for safe effluent there we have facility of **ETP** (Effluent Treatment Plant)

Sustainable Production:

Production activities can be referred to as sustainable production as long as they are economically effective for businesses yet, at the same time, affect the environment and human health as little as possible, use only a minimum amount of natural resources, energy, toxic substances and produce a minimum amount of waste, effluent and emissions complying with applicable legislations. This is closely linked with the cycle of **reduce, recycle & reuse** especially since every producer is also a consumer and every consumer can promote the above principles through selecting the products he or she buys.

Importance of Sustainable Production:

Sustainability of products through economically sound processes that minimize negative environmental impacts while conserving energy and natural resources has transformed the manufacturing landscape. Now, certain green manufacturing standards that were once a nice benefit, such as reducing water and energy used, minimizing waste and decreasing dangerous emissions, are expected from manufacturers.

**SUSTAINABLE PRODUCTION
FOR INTERESTED PARTIES & STAKEHOLDERS**

Declaration of acknowledgment of the guidelines on “Sustainable Production”

Confirmation

Please place check mark in relevant fields:

☐ I hereby confirm that I have read and understood the above information and that I support sustainable development along the entire value chain.

☐ I hereby confirm that I comply with the minimum requirement for the sustainable production and will forward it to my supply chain.

☐ I hereby confirm that I will disclose my preliminary stages through to the Sustainable Production and its continual improvement.
